SUMMARY

AI Engineer with a computational-science background who builds and ships LLM-powered and data systems. Hands-on with Python, cloud (AWS/Azure), RAG, LLM fine-tuning, and data engineering, with applied experience in fraud/AML detection and a track record of teaching Python and AI to hundreds of professionals. MChem from the University of Edinburgh. Comfortable owning a problem end-to-end — from data and prototype to deployed, evaluated, human-in-the-loop systems — and explaining it to non-engineers.

TECHNICAL SKILLS

Languages	Python, SQL, JavaScript, C++, Java (<i>familiar</i>)
AI / ML	LLMs, RAG, prompt engineering, LangChain, fine-tuning, PyTorch, TensorFlow, Keras, scikit-learn, NLP, CV
Data & Cloud Engineering	AWS, Azure, Databricks, Spark, Airflow, Pandas, NumPy, PostgreSQL, MS SQL, ETL pipelines Docker, Git/GitHub, REST APIs, Flask, Django, Terraform, CI/CD, Linux, data governance & quality

EXPERIENCE

AI Engineer — Independent (Vilniaus Asmodas) 2025 – Present

Building prototypes, applied AI, technical writing

Vilnius, LT

- Built four end-to-end AI prototypes (fraud/AML investigation, LLM governance, PLG onboarding, B2B agent workspace) to demonstrate production patterns — live at aurimas.io.
- Went deep on modern AI engineering: LLM/RAG pipelines, prompt design, evaluation, and human-in-the-loop workflow patterns.
- Author of *Molecule to Machine*, a weekly newsletter (88+ editions) tracking applied AI, ML, medicine, and science.

AI Lead / Engineer — Paysera 2024

AML/fraud systems & AI enablement

Vilnius, LT

- Worked on AML/fraud detection systems and helped colleagues adopt AI tools as everyday assistants — bridging technical implementation with practical, non-technical enablement.

AI / ML Engineer — Royalty Range 2024

Fraud detection (contract)

Remote

- Designed and delivered a transaction fraud-detection notebook that flagged suspicious transactions for human review — building the scoring/flagging logic and prioritizing recall and analyst oversight over full automation.

Technical Consultant — C&R Software 2023

AWS, Python, ETL & data governance

Remote

- Automated and optimized databases and workflows using AWS and Python; improved debt-collection solutions with a focus on ETL and data quality.
- Built and tuned databases in PostgreSQL and MS SQL Server; ensured data accuracy, consistency, and security; supervised junior team members.

AI & Python Lecturer — Code Academy (LT) & LIKTA (LV) 2022 – 2023

Teaching Python & Artificial Intelligence

Lithuania & Latvia

- Taught Python (Pandas, NumPy, CS fundamentals) and AI (intro and advanced, including Python for AI) to adult learners across two countries.
- Designed course materials, hands-on exercises, and maintained public GitHub repositories of code examples.

Data & Research Engineer — Euromonitor, Vilnius University, Thermo Fisher 2011 – 2022

Data engineering & computational research

LT / EU / US

- Built JavaScript web-scraping robots at Euromonitor; analyzed scRNA-seq data with ML in Python; ran HPLC/mass-spectrometry on COVID-19 proteins; co-developed a C++ DNA-protein analysis platform during doctoral research (withdrawn). Earlier research scholar at Janelia (HHMI), LMU Munich (Amgen), EMBL & Nottingham.

SELECTED PROJECTS (built to demonstrate how I work · code at github.com/aurimas13)

- **ClearTrace Intelligence** — AI fraud & AML investigation prototype, human-in-the-loop: cleartrace.aurimas.io
- **Aegis AI** — LLM governance, observability & cost-tracking prototype: aegis.aurimas.io
- **AI Gateway** — product-led-growth onboarding prototype (cold-start problem): gateway.aurimas.io
- **Agentic Mobile** — B2B mobile AI-agent workspace prototype: agentic.aurimas.io

EDUCATION & CERTIFICATIONS

Specialisations & Certifications in Computer Science & AI 2021 – 2024

Coursera / Databricks / Azure / AWS — Deep Learning Specialization, Generative AI, ML & SQL bootcamps

MChem, Master of Chemistry with Honours — The University of Edinburgh 2015
