Professional Summary

AI Product Manager & AI Engineer | who ships secure AI tools. Experienced in creating/leading LLM workflows, fraud/AML, and data-platform initiatives from data intuition to discovery to governed rollout in fintech and enterprise environments. Managed teams of more than 10+ engineers, delivered strategies for stakeholders, and was responsible for managing/creating applications that served millions of users.

Writing

Molecule To Machine

2023 – Present

Weekly newsletter on AI, programming, technology, chemistry, science, robotics, and medicine, written through the lens of practical impact and future implications. 1100+ subscribers. 88 posts.

Experience

AI Product Manager

2025 – Present

Vilniaus Asmodas

Vilnius, Lithuania

- Led AI product delivery from discovery through rollout across various concurrent initiatives, turning early concepts into shipped capabilities with clear OKRs, usage tracking, and stakeholder ownership.
- Reworked targeted workflows end-to-end, cutting cycle time and improving how teams used AI and data in day-to-day decisions.
- Built the data flows behind AI & analytics features so products were usable in production, not just impressive in demos.
- Introduced governance and error-monitoring practices that increased trust, reliability, and reuse across AI & data assets.

Independent Consultant | AI Engineer | AI Product & Platform Delivery

2015 – Present

Self-Employed | Contract

Vilnius, Lithuania

- Led a cross-functional team ranging from 10+ engineers delivering AI products across fintech and enterprise environments, establishing data governance standards, and building organizational trust in AI outputs.
- Designed AI-assisted fraud and AML workflows that reduced manual review time as well as improved investigation and reporting efficiency. Live demo: <https://cleartrace.aurimas.io>
- Helped fintech and enterprise teams move AI, data, and automation concepts out of slide decks and into deployable products used in real business workflows.
- Built reusable ingestion, validation, and metrics frameworks that accelerated delivery across multiple AI/data initiatives and improved reporting consistency.
- Developed AI product MVPs and platform concepts that expanded automation coverage substantially and generated seven-figure annualized savings.
- Advised executive and engineering stakeholders on scope, trade-offs, and rollout plans for LLM-enabled workflows.

Core Skills

Product: strategy, trust, discovery, prioritization, roadmap planning, stakeholder management, & Agile/Scrum delivery.

AI Systems: LLMs, RAG, Gen AI workflows, model-enabled operations, AI Product Design, AI Agents & AI Skills.

Technical Stack: Python, SQL, Databricks, Spark, Airflow, Azure, AWS, GCP, Docker & Kubernetes.

Metrics/Outcomes: OKRs/KPIs, launch planning, usage tracking, adoption metrics, A/B testing, & process optimization.

Featured Projects (with live demos)

- ClearTrace Intelligence — AI Fraud & AML Platform: <https://cleartrace.aurimas.io>
- Aegis AI Enterprise — LLM Governance Platform: <https://aegis.aurimas.io>
- AI Gateway PoC — Product-Led Growth Prototype: <https://gateway.aurimas.io>
- Agentic Mobile MVP - B2B Mobile Agentic Platform: <https://agentic.aurimas.io>

Education

Specializations and Certifications in Computer Science and Artificial Intelligence

2015 – 2025

Databricks / Azure / GCP / AWS

Remote

MChem in Chemistry

Class of 2015

The University of Edinburgh

Edinburgh, United Kingdom
