SUMMARY

AI Product Engineer who owns the full loop on LLM-powered products - from user problem and specifications, to building and shipping the code, to evaluation, monitoring, and iteration. I came to it from Chemistry (MChem, Edinburgh) and years of computational research, then moved into building: fraud/AML detection, RAG pipelines, and data tooling in Python on AWS/Azure - and teaching Python and AI to hundreds of professionals. I decide what to build, build it, judge whether it worked with real metrics, and use AI to accelerate every step.

CORE CAPABILITIES

Build (Engineer)	Python, SQL, JavaScript, Flask/Django, REST APIs, Docker, Git, CI/CD, AWS/Azure.
AI	LLMs, RAG, skill engineering, PyTorch, TensorFlow, NLP, CV.
Eval & Iterate	Eval harnesses, guardrails, drift & latency monitoring, A/B testing, telemetry, metrics.
Product & UX sense	Discovery, scoping, roadmap, user-workflow design, stakeholder alignment, Agile/Scrum.

EXPERIENCE

AI Product Engineer - Independent (Vilniaus Asmodas) 2025 – Present

Owning AI products end-to-end, applied AI, technical writing Vilnius, LT

- Owned four AI products end-to-end - from user problem and specification through build, evaluation, and iteration (fraud/AML investigation, LLM governance, PLG onboarding, B2B agent workspace), live at aurimas.io.
- Closed the loop on probabilistic systems: LLM/RAG pipelines, evaluation harnesses, guardrails, and human-in-the-loop checkpoints - using AI to accelerate each step without sacrificing correctness.
- Author of *Molecule to Machine*, a weekly newsletter (94+ editions) tracking applied AI, ML, medicine, robotics, and science.

AI Lead - Paysera 2024

AML/fraud systems, teaching & AI enablement Vilnius, LT

- Worked on AML/fraud detection systems and helped colleagues adopt AI tools as everyday assistants, bridging technical implementation and practical, non-technical enablement. Taught technical teams.

AI / ML Engineer - Royalty Range 2024

Fraud detection, AI comparisons (contract) Remote

- Defined the problem, built the scoring/flagging logic, and shipped a transaction fraud-detection tool that flagged suspicious transactions for human review - prioritizing recall and analyst oversight over full automation. Compared AI models.

Technical Consultant - C&R Software 2023

AWS, Python, ETL & data governance Remote

- Automated and optimized databases and workflows using AWS and Python; improved debt-collection solutions with a focus on ETL and data quality.
- Built and tuned databases in PostgreSQL and MS SQL Server; ensured data accuracy, consistency, and security; supervised junior team members.

AI & Python Lecturer - Code Academy (LT) & LIKTA (LV) 2022 – 2023

Teaching Python & Artificial Intelligence Lithuania & Latvia

- Taught Python (Pandas, NumPy, CS fundamentals) and AI (intro and advanced, including Python for AI) to adult learners across two countries.
- Designed course materials, hands-on exercises, and maintained public GitHub repositories of code examples.

Data & Research Engineer - Euromonitor, VU, Thermo Fisher, Janelia, LMU Munich 2011 – 2022

Data engineering & computational research LT / EU / US

- Built JavaScript web-scraping robots at Euromonitor; analyzed scRNA-seq data with ML in Python; ran HPLC/mass-spectrometry on COVID-19 proteins; analyzed DNA-protein interactions during doctoral research at Vilnius University - VU (withdrawn). Earlier research scholar at Janelia (HHMI), LMU Munich (Amgen), EMBL, & Nottingham.

SELECTED PRODUCTS (owned end-to-end, built to show how I work · code at github.com/aurimas13)

- ClearTrace Intelligence** - AI fraud & AML investigation prototype, human-in-the-loop: cleartrace.aurimas.io
- Aegis AI** - LLM governance, observability & cost-tracking prototype: aegis.aurimas.io
- AI Gateway** - product-led-growth onboarding prototype (cold-start problem): gateway.aurimas.io
- Agentic Mobile** - B2B mobile AI-agent workspace prototype: agentic.aurimas.io

EDUCATION & CERTIFICATIONS

Specialisations & Certifications in Computer Science & AI 2021 – 2024

Coursera / Databricks / Azure / AWS - Deep Learning Specialization, Generative AI, ML & SQL bootcamps

MChem, Master of Chemistry with Honours — The University of Edinburgh 2015
